EDUCATION

Rajasthan Technical University (RTU)

B.Tech in Computer Science Engineering; CGPA: 8.73 (upto 5th Semester)

Kota, Rajasthan

2023 – 2027

EXPERIENCE

Softsensor.ai

15 May 2026 – 30 June 2026

Orbit (Enterprise Workspace Collaboration Platform)

[Github]

- Architected a scalable enterprise project management backend using **Python** and **FastAPI**, employing **OOPs** concepts and **Data Structures** to optimize assignment algorithms.
- Developed a dynamic **React.js** frontend and integrated real-time WebSockets and Redis for instant notifications and task tracking.
- Designed and executed **automated test scripts** using Pytest to perform functional and integration testing across **REST APIs**.
- Ensured continuous integration by setting up automated **CI/CD pipelines** via GitHub Actions.

Fotographiya (iStart-incubated startup)

16 June 2025 – 30 July 2025

Wedding Image Culling Suite (Computer Vision Pipeline)

[Github]

- Engineered an **AI**-powered automated image culling backend utilizing **Python** and **FastAPI** to intelligently filter and reject flawed images.
- Applied analytical thinking to design **automated test cases** and evaluation scripts using **YOLOv8** and **PyTorch**, rapidly filtering images.
- Applied advanced data structures to cluster near-duplicate burst shots via L2 distance on CLIP embeddings, integrating FaceNet/MTCNN for VIP recognition.

PROJECTS

Voice RAG Backend (Portfolio Assistant)

[Github]

Independent Project

- Developed a Voice-enabled Retrieval-Augmented Generation (RAG) backend utilizing **Vector Databases** to serve as an interactive personal portfolio assistant.
- Orchestrated seamless audio processing and intelligent query retrieval via **REST APIs**.

Call Sentry (Android Privacy Utility)

[Github]

Independent Project

- Built a native Android application using **Kotlin** to provide offline, privacy-first call and SMS filtering.
- Implemented a robust whitelist-based blocking architecture utilizing background Broadcast Receivers and system-level permissions.

ACHIEVEMENTS & STRENGTHS

3D N2V Calcium Denoising (AI Research Project)

[Github]

AI4Life International Grand Challenge

- **Achievements: Global Rank 2** in the AI4Life International Grand Challenge for research in 3D calcium denoising using self-supervised learning models.
- Built a self-supervised Noise2Void (N2V) model utilizing **PyTorch** for denoising high-resolution 3D calcium imaging data.

TECHNICAL SKILLS

Programming: Python, JavaScript, Kotlin, C++

Web & APIs: HTML, CSS, Node.js, FastAPI, React.js, REST APIs

Testing & CI/CD: Pytest, Automation Testing, CI/CD Pipelines, Docker, GitHub Actions

Tools & Core Domains: Git, GitHub, MongoDB, PostgreSQL, Redis, YOLOv8, PyTorch, Vector Databases, RAG, Data Structures, OOPs
